

Next Gen Trypsin: Large Molecule LC-MS/MS Bioanalysis Today, Not Tomorrow

Dr Ashley S Phillips
ashley.phillips@lgcgroup.com

18th November 2020

Large Molecule Bioanalysis by LC-MS/MS

We are always in search of lower LLOQs

which pushes us towards long, complicated protocols

leading us to:

- Overnight digestion steps
- Immunoaffinity enrichment
- Solid Phase Extraction

What is Next Generation Trypsin?

- **Next Generation Trypsin reagents aim to speed up the digestion process:**
- **They are either:**
 - Heat Stable Variants.
 - Bioreactor Style.
 - All in One Kits.

Fast... but is it any good?

The aim is to assess the next gen trypsin reagents for use in a quantitative bioanalytical method within a regulated laboratory environment.

- Stringent Criteria:
 - No miscleavages.
 - No deamidation or oxidation modifications.
 - Confident assignment.
 - Reproducible!

The Master Plan

Phase 1

Assess trypsins
by digestion of
protein standards
in buffer.

Phase 2

Top performing
trypsins
evaluated using
test sample.

Our Candidates

Promega
Trypsin Gold

Thermo
Smart Digest
Soluble

Thermo
Magnetic
Smart Digest

PreOmics
iST Kit

Promega Rapid
Digestion

Phase 1 Overview

Protein standards selected to represent potential future biotherapeutics or biomarkers and a range of structural complexities.

BSA
3V03

Cytochrome C
Horse Heart
1AKK

SILuLite
SigmaMAb
IgG1

Phase 1 Overview

Protein standards selected to represent potential future biotherapeutics or biomarkers and a range of structural complexities.

SILuLite
SigmaMAb
IgG1

The Method

Standard Peptide Mapping Approach used for Phase 1 and Phase 2

- > Gradient: 2-50% organic over 50 minutes
- > Phases: 0.1% FA in ACN and 0.1% FA (aq)
- > Column: Waters Acquity HSS T3 2.1x100 mm

Instruments:

• Phase 1:

- > Waters Synapt G2 equipped with a Waters Acquity H-Class Bio
- > Acquisition Type: MS^e
- > Analysis Software: Biopharmalynx

• Phase 2:

- > Sciex 6600 equipped with a Waters Classic Acquity
- > Acquisition Type: SWATH
- > Analysis Software: Biopharmaview

Phase 1

Digestion in buffer

Heavy Chain	T001	T024	T027	T010	T013	T014	T038	T039	T004	T022	T031	T043	T006	T023*	T015*	T021*	T002*	T016*	T011*	T037*	T042*

* denotes carbamidomethyl modification
n/o - not observed

Smart Digest Soluble and Rapid Digestion – Trypsin
are the best performing candidates across all protein standards

Reduction and Alkylation: a thing of the past?

Heat Stable Trypsins:

✓ Heat denaturation

vs.

✗ Chemical denaturation

But why?

I'll do it anyway

The impact of reduction and alkylation

Heavy Chain	T001	T024	T027	T010	T013	T014	T038	T039	T004	T022	T031	T043	T006	T023*	T015*	T021*	T002*	T016*	T011*	T037*	T042*

★ *Weigh up requirements*

Phase 2

Digestion in matrix

Phase 2 Overview

- **Test sample:** SILuLite SigmaMAb was reconstituted in Rat K2 EDTA plasma.
 - Samples run in triplicate.
 - Reduction & Alkylation performed prior to digestion

**Promega
Rapid Digestion -
Trypsin**

**Promega
Trypsin Gold**

**Thermo
Smart Digest
Soluble**

Time

1, 2, 3 hours

Overnight

1, 2, 3 hours

Ratio

50:1, 100:1, 500:1

100:1

50:1, 100:1, 700:1 (MRR)

Overview statistics do not tell the whole story...

A Bottom Up Protein LC-MS/MS Bioanalytical Assay will typically focus on a single surrogate peptide for quantitation.

Selection of Surrogate Peptides

- The most intense charge state for each peptide was selected and averaged amongst replicates to enable comparison.
- **Heavy Chain**
 - STS GGTAALGCLV K
 - Does not feature any residues susceptible to modification (M,N,Q)
 - T PEVTCVVVDV SHEDPEVK
 - Does not feature any residues susceptible to modification (M,N,Q)
- **Light Chain**
 - TVAPTECS
 - Observed in all reagents including Trypsin Gold

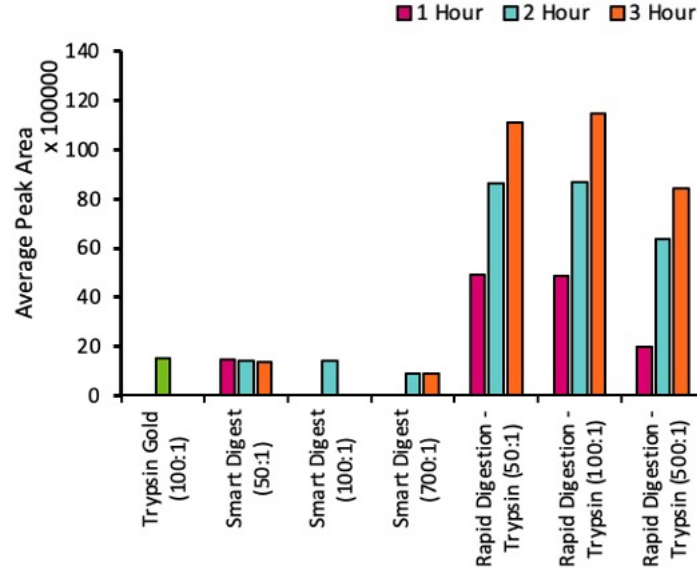

TVAPTECS Surrogate Peptide

Next Gen Trypsins perform much better than traditional overnight digestion

- ★ Potential issues with peptide degradation.
- ★ Rapid Digestion suggested protein:enzyme ratios are overkill
- *Higher protein:enzyme ratios give comparable data*

STSG Surrogate Peptide

Rapid Digestion Trypsin generates a far greater peptide intensity in a fraction of the time!

TPEV Surrogate Peptide

The traditional overnight digest far outperforms the next gen trypsins

Phase 2 Outcomes

- **Promega Rapid Digestion – Trypsin is our preferred next generation trypsin**
 - It performs as comparably or better than Trypsin gold, whilst requiring a shorter digestion time.
 - Although TPEV is an exception to the rule – sensitivity demand will decide whether next gen trypsin are a viable option.

**Is this the end of two
day protein LC-MS/MS
bioanalysis?**

But what are the benefits?

- **Improved Sensitivity***
*not guaranteed
- **Quicker Study Turnaround**
- **Faster Method Development**
- **Rapid Troubleshooting**

LGC

Is this the end of two day protein LC-MS/MS?

Almost...

Will a 1 hour digest
actually save me any
time?

Limited selection of enzymes

Sometimes trypsin just isn't suitable

Optimisation is Key!

*Protein:Enzyme Ratio,
Incubation Time and Pre-Digestion
Processing all impact performance.*
